

U.S. Adults' Use of Internet for Health Information Doubles

August 21, 2008

A new study from the Center for Studying Health System Change found that the percentage of U.S. adults using the Internet to find health information increased from 16% in 2001 to 32% in 2007. The increase can be attributed in part to the substantial growth in online access and residential broadband Internet, according to the study. Health IT Strategist.
